Moogenilla Angus

BULL SALE

1pm, Friday 5th August 2022

CWLE Forbes

10km North of Forbes, NSW on the Newell Hwy.

51 Angus Bulls

- HBR & APR registered with the Angus Society of Australia.
- Structure and Temperament Independently Assessed by Jim Green, Beef Excel.
- Breeding Soundness Inspected by Lachlan Valley Vet Clinic, Forbes.
- BVDV (pestivirus) PI tested negative and Pestigard vaccinated * 2.
- 7 in 1 and Vibrio vaccinated * 2, drenched for internal & external parasites.
- Fully Breedplan/TACE recorded herd for over 30 years.
- Bred and grown in extensive, commercially focused, grazing systems.

Inspections from 10am, complimentary BBQ lunch & drinks served.

Selling Agent: KMWL & Co, Jack Whitty 0407 668 669,
Sam Parish 0418 832 086, Luke Whitty 0427 524 442,
Josh Crosby 0409 813 260 **Interfaced with Auctions Plus.**

2% rebate to outside agents by introduction.

Usual auction sale conditions apply.

Bulls sold GST excl; GST will be added to the bid price under hammer.

Moogenilla Angus Bulls

The 'R' Bulls

- Sons of Baldrige Beast Mode, Chiltern Park Moe, Baldrige Command, Glenoch-JK Makahu and Moogenilla bulls by Pathfinder General K7 feature in the line up at auction in 2022.
- Some of the R bulls were conceived on our country in the far west of NSW in 2019, due to extreme drought at Condobolin. The mature cows were calf weighed out there, but not AI'd. We sent our best Moogenilla sons of Pathfinder General K7, Te Mania Emperor and Baldrige Beast Mode out for a natural joining. The heifers and first calvers were AI'd back at Condobolin, supplying the AI sons and many of the lower birthweight bulls suitable for heifers in the auction.
- All bulls are independently assessed by Jim Green for temperament and structure, with the scores presented in each lot description. We are working hard to only select AI and in herd sires with exceptional temperament and structure; it is the first criteria a bull must meet before looking at his other EBVs. This line up of bulls is without doubt the most docile group we have presented for many years, so the selection process is working.

Herd Health

- Every bull presented is independently vet checked and guaranteed for soundness and fertility. This includes inspection of the penis and testicular palpation.
- All bulls at auction are tested negative for PI pestivirus. In over 10 years of testing Sale bulls we have never identified a persistently infected (PI) animal. We also undertook a random sample of blood tests from young animals a few years ago, and they were all naïve to pestivirus – indicating it is not present in the Moogenilla herd. Sale bulls are vaccinated twice with Pestiguard to protect them from contracting pestivirus when they go out to work in other herds – we recommend an annual booster. (Our females are also vaccinated).
- All Sale bulls are vaccinated twice with Vibrio vaccine and three times with 7 in 1.

Bull Value

- Our goal is to provide world class Angus genetics to commercial producers at viable prices. We know that YOUR profitability is the key to ours. With the use of Artificial Insemination across the Moogenilla female herd for over 30 years, we have accessed a full range of genetic advantage. We work hard to select sound, functional, docile and high \$ Index (translate as profitable) females and AI sires to breed from.
- The Moogenilla bulls have sold at around the NSW average auction prices for the past 13 years. We aim provide a choice of exceptional breed leading genetics, raised in a western NSW commercial environment.

Guarantee

- Moogenilla Angus guarantees the structural integrity and fertility of all bulls in the sale. If a bull is infertile or breaks down in the next 12 months, for reasons other than injury, infection or disease contracted since leaving Moogenilla Angus; the bull will be replaced, or purchase price less salvage value refunded, or a credit issued. Your satisfaction is important to us and we will respond quickly and co-operatively if any problem arises. **Please phone us to discuss any concerns at all!**
- We recommend you insure the animal against injury before transportation from the sale.

Managing Your New Bull

- Please be aware these young bulls have been run in a large group, in large paddocks, all their lives. Ensure you settle a bull in with other cattle, being alone is stressful for herd animals. A bull is most likely to develop a condition, infection or injury that causes infertility AFTER the joining period has started. Observe your new bull and observe your females for excessive cycling activity towards the end of joining.

Moogenilla Quinella Q33

In a vote of confidence in the breeding program of Moogenilla Angus, Moogenilla Quinella Q33 was purchased by Rennylea Angus, Pathfinder Angus and AgriGene at the 2021 auction for \$64000. His semen is being distributed through AgriGene, with the feedback being very positive. Many breed leading studs and commercial producers are using him. Thanks also to the underbidders on Q33 last year, including two long time Moogenilla clients who pushed the seedstock purchasers to the top price. Q33's dam, grand dam and great grand dam are all terrific cows, with good fertility, structure and docility. Some of the new owners of Q33 inspected the Moogenilla cows in May 2022, and went away with confidence in the depth of his maternal line, and that he will continue to make a positive impact on the Australian Angus herd.

MOOGENILLA QUINELLA Q33

UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Calving Ease	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEPtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcass	CWT	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
	RBV	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more desirable foot angle.
	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate more desirable claw structure.
Selection Index	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	\$A-L	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems. The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

Beef Class Structural Assessment System

How to use:

The Beef Class Structural Assessment System uses a 1-9 scoring system for feet and leg structure:

- A score of 5 is ideal
- 4 and 6 show slight variation from ideal, but this includes most animals. Any animal scoring 4 and 6 would be acceptable in any breeding program
- 3 and 7 shows greater variation, but would be acceptable in most commercial breeding programs, however seedstock producers should be wary
- 2 and 8 are low scoring animals and should be looked at carefully before purchasing

A 1-5 scoring system is used for sheath attachment. For feet and leg assessment, animals need to be on a hard, flat and even surface where animal can move/stand naturally.

Traits:

	Scoring Range	Description
Front Feet Claw Set	1 - 9	1 - open divergent; 5 - good; 9 - extreme scissor claw
Rear Feet Claw Set	1 - 9	1 - open divergent; 5 - good; 9 - extreme scissor claw

Reference: Shape (primarily curl) and evenness of the claw set.

	Scoring Range	Description
Front Feet Angle	1 - 9	1 - steep (stubbed toe); 5 - good; 9 - shallow heel
Rear Feet Angle	1 - 9	1 - steep (stubbed toe); 5 - good; 9 - shallow heel

Reference: Strength of pastern, depth of heel and length of foot.

	Scoring Range	Description
Rear Legs Side View	1 - 9	1 - straight (post legged); 5 - good; 9 - sickle hocked

Reference: Angle measured at the front of the hock.

	Scoring Range	Description
Rear Leg Hind View	1 - 9	1 - bow legged; 5 - good (parallel); 9 - cow hocked

Reference: Direction of the feet when viewed from the rear.

	Scoring Range	Description
Sheath and Naval Scores	5 - 1	5 - extremely clean/tight to body; 1 - extremely pendulous

Reference: Sheath attachment

Temperament

Reference: 1-5 (half scores permitted) using yard test scale below:

1. **Docile** The animal is easily held in the corner and the handler can get close enough to put their stick on the animal.
2. **Restless** The animal can be held in the corner but exhibits some restlessness and flicking of the tail. The handler cannot get close enough to put their stick on the animal before it moves away.
3. **Nervous** The animal is not easily held in the corner even when the handler is some distance back from the animal, continual movement and tail flicking.
4. **Flight(wild)** The animal cannot be held in the corner; frantically runs the fence line and may jump when penned individually, exhibits long flight distance.
5. **Aggressive** Similar behavior to score 4 but is also aggressive towards the handler; stares at the handler and threatens to charge or charges (Handler is advised to exit the yard before the animal actually charges).

The Average Angus Breeding \$ Index of Moogenilla calves born each year, compared to breed average in Australia. Higher \$ Index = more \$'s from your self replacing Angus breeding herd.

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

- PV : both parents have been verified by DNA.
- SV : the sire has been verified by DNA.
- DV : the dam has been verified by DNA.
- # : DNA verification has not been conducted.
- E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.
